- Local MAC Authentication assigns attributes such as VLAN and QoS using locally configured profile that can be a list of MAC prefixes

Resiliency and high availability

• Virtual Switching Framework (VSF)

creates one virtual resilient switch from up to four switches; servers or switches can be attached using standard LACP for automatic load balancing and high availability; simplify network operation by reduce the need for complex protocols like Spanning Tree Protocol (STP), Equal-Cost Multipath (ECMP), and VRRP

• Virtual Router Redundancy Protocol (VRRP)

Overview

allows groups of two routers to dynamically back each other up to create highly available routed environments for IPv4 and IPv6 networks (limited to 128 VRs)

- IEEE 802.1s Multiple Spanning Tree
 provides high link availability in multiple VLAN environments by allowing multiple spanning trees; provides legacy support
 for IEEE 802.1d and IEEE 802.1w

- SmartLink

provides easy-to-configure link redundancy of active and standby links

Management

• SNMPv1, v2, and v3

provide complete support of SNMP; provide full support of industry-standard Management Information Base (MIB) plus private extensions; SNMPv3 supports increased security using encryption

- Zero-Touch Provisioning (ZTP) simplifies installation of the switch infrastructure using the Aruba Activate-based or a DHCP-based process with AirWave Network Management
- Aruba Central support cloud based management platform offers simple, secure, and cost effective way to manage switches

Manageability

Dual flash images

provides independent primary and secondary operating system files for backup while upgrading

- Friendly port names allow assignment of descriptive names to ports
